# FIELD ENGINEER

CAPLUM WEB FOR SMALL DEVICES

WWW.ARDLIN.NET

Standard Caplum runs well on 10" tablets with a browser offering the full functionality of Caplum. However when viewed through a phone browser the text gets too small or the screen has to be scrolled to see the full screen. The buttons are too small and the full screen display can use a lot more data than required.
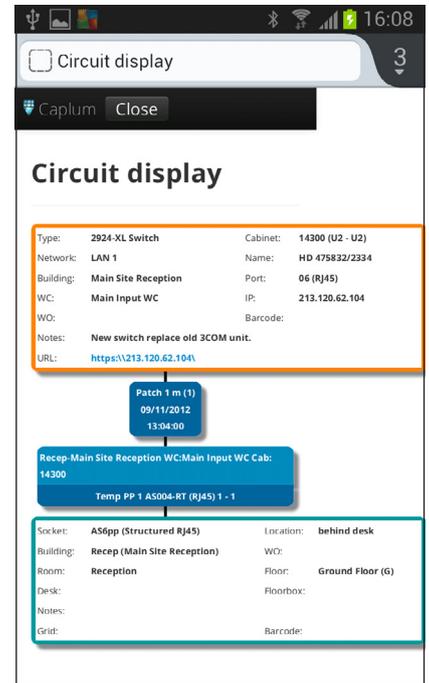

We decided not to try and recreate the whole of Caplum in a phone useable version but to create a small ultra thin client that would work well with small screens, and to give this interface just the functions you are likely to need in the field whilst working.

As you can see from the screen shot the interface in very simple with large buttons and monochrome to aid visibility.

This functionality is part of the main Caplum core product so it is available to all Caplum users at no extra charge.

Some screens in the field interface are only available on the on this interface as they are designed to be quick and simple to use.

Our ultimate goal is that you can complete works orders from the field in real time so your customers will know the job is complete instantly and not at the end of the day or the following morning when Caplum is updated. This is especially powerful if you have Caplum setup to automatically email your customer when the works order is completed.

We currently recommend Firefox as it is the best browser on mobiles that we have tested and it is available across most mobile devices.

The software is in Beta release stage at the moment and we are asking customers for their feedback and suggestions as to additional functionality they may require.
